

Malaria Digital Community Health Assessment Contributors

In 2020, the U.S. President's Malaria Initiative (PMI) launched its Digital Community Health Initiative (DCHI) with a vision to strengthen quality health delivery at the community level by investing in the scale-up of digitally enabled community health platforms. As an initial step, PMI partnered with Digital Square at PATH to engage national malaria programs and other key stakeholders to understand the current digital environment and define country-specific priorities for using digital technology in community health programs.

Many individuals—including staff from national malaria programs, PMI, PATH, Population Services International (PSI) and IntraHealth International, as well as consultants—supported this work by providing research, writing, management, and leadership support. Below is a full list of the contributors who were instrumental to the success of the malaria digital community health assessment across PMI's 27 partner countries.
